Page No.

Table A Principal statistics for reporting manufacturing establishments, classified by industry group and analysed by :-

A1	Number of persons engaged	1
A2	Type of ownership	6
A3	Census district	9
A4	Value of gross output	15
A5	Census value added	20

Table B Detailed statistics for reporting manufacturing establishments, classified by industry sector/
group and arranged in the following sections :-

B1	Number of persons engaged and labour cost	25
B2	Purchases of materials, supplies and industrial services and miscellaneous operating expenses	31
B3	Sales and work done and other receipts	37
B4	Gross output; consumption of materials, supplies and industrial services; and value added	43
B5	Stocks at the beginning and end of year	49
B6	Acquisition and disposal of fixed assets	55

CHAPTER 1

BACKGROUND

The 1977 Census of Industry and its preceding enquiries

1.1 In 1978, the Census and Statistics Department conducted an annual Census of Industry covering the activities of mining and quarrying, manufacturing, and the supply of electricity, gas and water in respect of 1977. Its coverage conformed with Major Divisions 2, 3 and 4 of the United Nations International Standard Industrial Classification of All Economic Activities (I.S.I.C.), 1968 edition. Preceding enquiries in this series include the 1973 benchmark Census of Industrial Production, the 1974 and 1975 Surveys of the Textiles and Clothing Industries, and the 1976 Census of Industry. The second benchmark Census of Industrial Production in respect of 1978 is now in progress.

Purposes of the 1977 Census

1.2 The main purposes of the 1977 Census are :-

- (a) to collect statistics required for assessing industrial performance, identifying structural changes and drawing intra- and inter-industry comparisons;
- (b) to collect basic data required for estimating value added by the process of industrial production and for updating the estimated contribution of the industrial sector to Hong Kong's Gross Domestic Product (GDP);
- (c) to collect commodity details of industrial production so as to depict changes in output level and product mix.

Legislation

1.3 The 1977 Census was conducted under the authority of the Census (No. 2) Order 1978 made by the Governor-in-Council under section 3 of the Census Ordinance (Chapter 316 of the Laws of Hong Kong) and published in the Government Gazette as L.N. 62/78 on 17th March 1978. The provisions of this Ordinance (which has subsequently been replaced by the Census and Statistics Ordinance 1978) covered inter alia powers to require answers from respondents and the preservation of confidentiality of individual information.

CHAPTER 2

METHODOLOGY

Questionnaire design

2.1 The questions asked in the 1977 Census resembled those of the 1976 Census. They included type of ownership, local/overseas investment, number of persons engaged, labour cost, contract and commission work, purchases, operating expenses, sales and work done, other receipts, stocks and capital expenditure. This enabled useful industry statistics to be derived, such as

consumption of materials supplies and industrial services, gross output, Census value added, and gross additions to fixed assets (refer to the Definitions of Statistical Terms in the Appendix for details). In addition, information was sought on sales of primary and secondary products (in both quantity and value) according to a commodity list provided by the Department delineating products by industrial origin.

Sampling

2.2 The register of manufacturing establishments maintained by this Department provided the sampling frame for the 1977 Census. The random sample was stratified by industry sector and by employment size within industry, and carried an overlapping design with the 1976 sample. Every manufacturing establishment engaging 50 or more persons was enumerated (whereas in the 1976 Census full enumeration was confined to manufacturing establishments engaging 100 or more persons). For establishments engaging fewer than 50 persons, a disproportionate sampling fraction was applied depending on the employment size, and in addition the method of optimum allocation was used for each stratum in relation to its variability in Census value added. A summary of the sample structure is given below :-

Size of establishment (number of persons engaged)	<u>Number of manufacturing establishments</u>		
	<u>On register</u>	<u>Selected in sample</u>	<u>Sampling fraction</u>
1 to 9	26 064	2 882	11%
10 to 19	5 799	1 363	24%
20 to 49	4 291	1 814	42%
50 & over	2 992	2 992	100%
Overall	39 146	9 051	23%

2.3 A relative sampling error of $\pm 5\%$ (at the 95% confidence level) was generally prescribed for estimates of Census value added in most industry sectors. For those industry sectors having pronounced contributions, the corresponding figure was $\pm 2\%$. These could, altogether, provide an error prescription of much less than $\pm 1\%$ on the Census value added estimate of the entire manufacturing industry.

2.4 Besides manufacturing, enquiries were also made of mining and quarrying establishments, Government industries, electricity and gas companies, and workshops in welfare institutions. All such concerns were enumerated.

Enumeration

2.5 The method of postal enquiry, with field follow-up contacts, was adopted for the Census. Publicity statements to industrial associations, press releases and reminder letters were issued from time to time so as to win co-operation from the selected respondents and to remind them of their reporting obligation.

2.6 During April 1978, Census questionnaires were mailed to the selected establishments. On 1st May 1978, field officers started their factory visits in order to explain the questionnaire contents and to offer assistance in completion of questionnaires. Many industrialists were able either to return the questionnaires by post or to provide them for collection after one or two

follow-up visits. A total of 7 490 completed questionnaires were received out of 9 051 forms despatched and the balance of 1 561 cases were either closures, untraceables, branches without separate returns or non-manufacturing establishments. The response rate attained was virtually 100%.

Questionnaire editing and quality checks

2.7 Completed questionnaires were first coded by industrial activity, geographic location and types of commodity produced. This was followed by thorough checks on arithmetic accuracy, logical consistency and credibility of data relative to one another. A series of analytical ratios showing structural relationships among the various industry statistics as well as average unit values of commodities were computed and put to test against pre-determined range limits. Dubious reported figures were normally clarified by telephone and, in the case of major defects, by personal interviews with the respondents. To safeguard against manual errors, the office editing process was reinforced by a programme of computer validation.

2.8 After all Census questionnaires had been edited individually, the basic reported data were aggregated to give a few preliminary tabulations and listings. A system of summary checking was then applied to these preliminary results by matching them against related economic statistics (notably those compiled from the 1976 Census), and by performing inter-firm comparisons of operating characteristics. Upon further refinement, the records were accepted for final tabulation.

Data processing

2.9 There were three components in the computer system designed for the 1977 Census, namely, sample selection, validation and tabulation. The computer system was developed and programs in COBOL and FORTRAN written by the Data Processing Branch of the Census and Statistics Department. Raw data were punched using the Department's XL40 input device. Live runs were carried out on the ICL 2970 computer installed in the Data Processing Division of the Government Secretariat.

Tabulation programme

2.10 The tabulation programme of the 1977 Census comprises 7 series. Within each series, tables are stratified by economic characteristics such as industrial activity, number of persons engaged, type of ownership, consumption of materials supplies and industrial services, value of sales and work done, value of gross output, and Census value added. The titles of these series are as follows :-

- Series 1 : Principal statistics for reporting establishments
- Series 2 : Detailed statistics for reporting establishments (arranged in 6 sections)
- Series 3 : Concentration ratios in terms of percentage shares accounted for by the 3, 6 and 9 largest reporting establishments with 50 or more persons engaged
- Series 4 : Concentration ratios in terms of 50%, 75% and 90% concentration accounted for by the largest reporting establishments with 50 or more persons engaged
- Series 5 : Standard errors of principal statistics
- Series 6 : Commodity sales statistics and product specialization and coverage ratios

Series 7 : Miscellaneous tables relating to establishments of joint venture/overseas interest, quota transfers, acquisitions of fixed assets, purchases of industrial services, and sales and work done.

Altogether 81 computer tabulations have been produced, of which 11 are selected for publication as supporting tables in this report. Details included in the other computer tabulations may be obtained from the Industrial Production Statistics Section of the Census and Statistics Department.

CHAPTER 3

INDUSTRIAL STRUCTURE AND PERFORMANCE FOR 1977

Summary of performance

3.1 During 1977, 43 276 manufacturing establishments were in operation for the whole or part of the year, with 861 441 persons engaged (see footnote 3 to Table 1). Altogether, they incurred \$11 263 million as labour cost and purchased \$36 009 million worth of materials, supplies and industrial services. Their total gross output was estimated to be \$55 081 million and total Census value added by manufacturing, \$19 394 million. For mining and quarrying, there were 12 establishments engaging 1 040 persons. They spent \$22 million as labour cost and \$68 million in purchasing materials, supplies and industrial services. A gross output of \$208 million was generated, giving a Census value added contribution of \$141 million. For electricity and gas supply, a total of 6 724 persons were engaged in 4 establishments, which expended \$199 million as labour cost and purchased \$948 million worth of materials, supplies and industrial services. Their gross output and Census value added were \$1 924 million and \$987 million respectively.

3.2 Table 1 presents principal statistics for the three industry divisions covered by the Census, with separate figures for Government industries and manufacturing workshops operated by non-profit institutions. For manufacturing, principal statistics are tabulated separately for reporting and non-reporting establishments (see footnote 1 to Table 1) and further analysed by number of persons engaged. For other divisions, the statistics relate to reporting establishments only.

Table 1 Principal statistics for establishments covered in the 1977 Census of Industry

(in HK\$'000 unless otherwise specified)

Industry Division	Number of establishments	Number of persons engaged	Labour cost	Purchases of materials, supplies & industrial services	Sales & work done	Gross output	Changes in the book value of stocks	Census value added	Other receipts	Miscellaneous operating expenses	Gross additions to fixed assets
Division 3 Reporting manufacturing establishments											
1 - 19 persons	26 308	162 263	1 790 353	4 165 563	7 049 329	7 077 664	66 949	2 950 716	9 276	575 951	317 810

Footnotes to Tables 1 to 17

1. By reporting establishments are meant those establishments selected for the Census who managed to provide completed returns during the enumeration, which generally took place some time after the prescribed Census reference period. Other establishments may fail to provide completed returns due to closure, suspension of business, non-contact despite repeated visits, etc. They are categorized as non-reporting establishments.
2. The economic contributions of non-reporting establishments are imputed on the basis of the cost and production patterns displayed by reporting establishments of the same industry and employment size. For the number of non-reporting establishments, however, the figures denote an actual count of those factories which are known to be in operation for the whole or part of 1977, but have ceased business prior to Census enumeration.
3. Figures on the number of persons engaged are reckoned as at the end of the accounting period for each reporting establishment. For non-reporting establishments, the figures are imputed and denote the number of job openings (having converted to full-year equivalents) available in these concerns before they terminated their operation.
4. Statistics presented in these 17 tables should encompass the economic contribution of the entire industrial sector. Where certain size strata were enumerated by means of a sample, statistics have been properly grossed up to represent the contributions of non-sampled establishments as well.
5. Government industries are those engaged in activities of Divisions 2, 3 or 4 i.e. quarries, printing, workshops in Prisons Department, abattoirs and water works.
6. Non-profit institutions are those engaged in manufacturing e.g. The H.K. Society for the Blind, H.K. Discharged Prisoners' Aid Society, St. James' Shelter Workshop for the Handicapped, Holy Carpenter Church Workshop.
7. In the case of mining and quarrying, the figures include one sand dredging establishment being permitted to work on the fringe territory of mainland China. In the monthly trade statistics, the sand thus obtained is reckoned as a merchandise import.
8. For all tables in this chapter, individual entries may not add up exactly to the respective totals due to rounding.

3.3 Tables 2, 3 and 4 contain production statements for the three industry divisions surveyed. In these consolidated accounts, production receipts are matched with the pattern of cost outlays. Among these outlays, labour cost, miscellaneous operating expenses, and gross operating surplus together constitute Census value added, a measure of industrial performance and economic contribution with the major intermediate inputs deducted. For manufacturing, consumption of materials and supplies accounted for 60% of the gross production, which was higher than the corresponding figures of 25% for mining and quarrying, and 48% for electricity and gas companies. Furthermore, gross operating surplus (including depreciation) as a proportion of gross output was the lowest in manufacturing - 7% as compared to 37% in both mining and quarrying and the supply of electricity and gas. The share of labour cost in gross output of mining and quarrying, manufacturing, and electricity and gas supply were 11%, 20% and 10% respectively.

Table 2 Production statement for mining and quarrying establishments

Cost outlays		Output		(HK\$ million)
Purchases of materials and supplies	54	Value of all sales	208	
Less: Increase in stocks of materials and supplies	- 2	Less: Decrease in stocks of work-in-progress and finished goods	- 1	207
Payments for work done by other industrial establishments	14	Receipts for work performed or services rendered to others	-	
Labour cost	22			
Miscellaneous operating expenses	43			
Balance: Gross operating surplus	76			
Total allocations of value of production	207	Total value of production		207

Table 3 Production statement for manufacturing establishments

Cost outlays		Output	
Purchases of materials and supplies	33 282	Value of all sales	50 446
<u>Less</u> : Increase in stocks of materials and supplies	- 322	<u>Plus</u> : Increase in stocks of work-in-progress and finished goods	367
Payments for work done by other industrial establishments	2 728	Receipts for work performed or services rendered to others	4 268
Labour cost	11 263		
Miscellaneous operating expenses	4 090		
<u>Balance</u> : Gross operating surplus	4 040		
Total allocations of value of production	55 081	Total value of production	55 081

Table 4 Production statement for electricity and gas companies

Cost outlays		Output	
Purchases of materials and supplies	931	Value of all sales	1 919
<u>Less</u> : Increase in stocks of materials and supplies	- 10	<u>Plus</u> : Increase in stocks of work-in-progress and finished goods	*
Payments for work done by other industrial establishments	17	Receipts for work performed or services rendered to others	5
Labour cost	199		
Miscellaneous operating expenses	84		
<u>Balance</u> : Gross operating surplus	703		
Total allocations of value of production	1 924	Total value of production	1 924

* less than \$0.5 million

Changes between 1976 and 1977

3.4 In Table 5, a comparison is made of the number of persons engaged, labour cost, purchases of materials supplies and industrial services, sales and work done, gross output, and Census value added for reporting establishments classified by broad industry groups over the years 1973, 1976 and 1977. Changes occurring between 1973 and 1976 have been discussed in the report of the 1976 Census of Industry. This report is confined, therefore, to changes occurring between 1976 and 1977.

3.5 According to the 1976 and 1977 Censuses, the number of persons engaged in the entire manufacturing sector decreased by 2% between 1976 and 1977. The highest decrease of 14% was recorded in the textiles industry, while the highest increase of 6% was observed in the manufacture of paper products, printing and publishing, as well as the manufacture of electrical and electronic products.

3.6 Labour cost increased by 10% overall. The highest increase of 29% occurred in the electrical and electronic products industries. A decrease of 6% in labour cost was recorded in the textiles industry, commensurate with its decrease in the number of persons engaged.

3.7 Concerning purchases of materials supplies and industrial services, sales and work done, gross output, and Census value added, the increases recorded for the manufacturing sector as a whole ranged from 5 to 7%. The highest increases in the first three economic attributes occurred in the chemicals, rubber and non-metallic mineral products industries, the figures being 36%, 38% and 35% respectively. In Census value added, the highest increase (28%) was achieved by the electrical and electronic products industries. Only the textiles industry showed decreases in all these attributes.

Table 5 Comparison of selected principal statistics for reporting manufacturing establishments, classified by broad industry group for the years 1973, 1976 and 1977

Industry group	(in HK\$'000 unless otherwise specified)

Footnotes to Table 5

- Figures for metal products and machinery and for electrical and electronic products relating to 1973 differ from that published in the 1973 Census of Industrial Production Report because those establishments producing electronic computing equipment have been taken out from non-electrical machinery and re-classified under electronic products.
- Figures on purchases, sales and gross output for other manufacturing industries as well as the grand total relating to 1973 have been adjusted downwards by deducting transactions of gold smelting shops. However, charges for providing gold smelting services still remain in the Census value added figures.
- Figures on purchases and Census value added for the tobacco industry as well as the grand total relating to 1976 have been adjusted retrospectively upon further correspondence with a tobacco firm.
- Figures in brackets shown under the columns of 1976 and 1977 denote percentage changes of 1976 over 1973, and of 1977 over 1976, respectively.
- The asterisks in brackets represent changes of less than 0.5%.

Chart 1 Contribution of various industries to total Census value added of the manufacturing sector for the years 1973 and 1977

3.8 In Table 6, a comparison is made of labour cost, purchases of materials, supplies and industrial services, gross output, and Census value added for reporting textiles and clothing establishments engaging 10 or more persons over the years 1973 to 1977. The present discussion, however, highlights those changes occurring between 1976 and 1977.

3.9 Total labour cost incurred by textiles and clothing establishments increased by 3% in 1977 over that of 1976. The bleaching, dyeing and textile finishing industries had the highest increase of 19% while the weaving industry had the largest decrease of 23%.

3.10 Purchases of materials, supplies and industrial services in all textiles and clothing industries decreased by 7%. The most notable changes are a 34% decrease for the weaving industry and a 21% increase for the knitting industry.

3.11 Gross output for the textiles and clothing industries as a whole fell by 5%. The weaving industry recorded the largest decrease of 33% in gross output. The most significant increase (16%) occurred in the bleaching, dyeing and textile finishing industries.

3.12 A decrease of 5% in Census value added was recorded for all textiles and clothing industries. The spinning industry had the largest decrease of 32% in this attribute. The highest increase of 7% was found in the bleaching, dyeing and textile finishing industry.

Chart 2 Gross output and Census value added for textiles and clothing establishments engaging 10 or more persons for the years 1973 to 1977

Analysis of industrial structure for 1977

3.13 Tables 7 to 14 cover reporting manufacturing establishments, i.e. those which were in operation during the enumeration period of 1978. These establishments together engaged 92% of the manufacturing workforce and contributed 94% to the total Census value added by manufacturing activities in 1977 (see Table 1 for details).

3.14 Table 7 presents principal statistics for each of the 22 industry groups. The largest five industries, in terms of major performance criteria, were wearing apparel, textiles, electrical appliances, plastic products, and fabricated metal products. Altogether, they contributed 77% to overall employment, 75% to total labour cost, 74% to material purchases, 73% to sales and work done, 73% to gross output, and 71% to Census value added of the manufacturing sector. Wearing apparel, in particular as the leading industry, made up 33% of the total number of persons engaged, 31% of total labour cost, 25% of material purchases, 25% of sales and work done, 25% of gross output, and 26% of Census value added in manufacturing. Corresponding shares for the textiles industry in relation to the overall were: persons engaged 15%, labour cost 16%, material purchases 22%, sales and work done 20%, gross output 20%, and Census value added 16%. Contributions to total Census value added from the electrical appliances, plastic products and fabricated metal products industries were 13%, 9% and 7% respectively.

Table 7 Principal statistics for reporting manufacturing establishments, classified by industry group

(in HK\$'000 unless otherwise specified)

Industry group	Number of establishments	Number of persons engaged	Labour cost	Purchases of materials, supplies & industrial services	Sales & work done	Gross output	Changes in the book value of stocks	Census value added	Other receipts	Miscellaneous operating expenses	Gross additions to fixed assets

3.15 Table 8 presents principal statistics analysed by number of persons engaged. The largest contribution to total Census value added in manufacturing was attributable to 397 reporting establishments engaging 200 to 499 persons, the figure being 18%. Census value added per person engaged was generally higher for larger establishments and was the highest (\$30 321) for those establishments engaging 500 to 999 persons. The group of establishments engaging 1 to 9 persons was the largest in number (63% of all) but they contributed only 9% to the total Census value added. Smaller establishments had a higher Census value added content in gross output because they specialized more in rendering support industrial services than in manufacturing goods for sale. Labour cost per person engaged was slightly lower in smaller establishments. This was due to the inclusion of working proprietors and partners, and unpaid family workers under the category of persons engaged, who took shares in the operating profit but not wages and salaries in unincorporated businesses. Labour cost per person engaged for the entire manufacturing sector averaged \$13 179.

Chart 3 Gross output and Census value added for reporting manufacturing establishments analysed by number of persons engaged for the years 1973 and 1977

3.16 Table 9 analyses principal statistics by type of ownership. Sole proprietorships were predominant, representing 71% of all manufacturing establishments enumerated in the Census. Nevertheless, in terms of Census value added, private limited companies had the greatest contribution of 63% to the total. Labour cost per person engaged were generally higher in incorporated businesses, whether public or private, than in sole proprietorships or partnerships.

3.17 Table 10 presents principal statistics by Census district. Four districts were the most important in respect of manufacturing activities. Arranged in a descending order of Census value added, they were: Tsuen Wan, Kwai Chung and Tsing Yi; Ngau Tau Kok, Kwun Tong and Lei Yue Mun; Kai Tak and San Po Kong; and Sham Shui Po, Cheung Sha Wan and Shek Kip Mei. These districts together contained 48% of all reporting establishments, accommodated 62% of the total workforce, and accounted for 66% of material purchases, 64% of sales and work done, and 61% of Census value added. Tsuen Wan, Kwai Chung and Tsing Yi alone rendered one fifth of the total Census value added.

Table 10 Principal statistics for reporting manufacturing establishments analysed by Census district

(in HK\$'000 unless otherwise specified)

Census district	Number of establishments	Number of persons engaged	Labour cost	Purchases of materials, supplies & industrial services	Sales & work done	Gross output	Changes in the book value of stocks	Census value added	Other receipts	Miscellaneous operating expenses	Gross additions to fixed assets

3.18 Table 11 analyses principal statistics by consumption of materials, supplies and industrial services. About 2% of all reporting establishments, each spending \$10 million or more in such items, together engaged 31% of the manufacturing workforce, paid 34% of the total labour cost, absorbed 52% of all material purchases and contributed 42% to the total Census value added. The majority of reporting establishments (57%) consumed materials, supplies and industrial services in a range of \$1 000 to \$24 000, or of \$50 000 to \$249 000. They contributed about 10% to the total Census value added.

Chart 4 Gross output and Census value added for reporting manufacturing establishments analysed by Census value added for the years 1973 and 1977

Inter-industry comparison of structural ratios

3.22 Table 15 presents structural ratios obtained by expressing various categories of input as a percentage of the total value of manufacturing output. The four components of gross output are: consumption of materials, supplies and industrial services; labour cost; miscellaneous operating expenses; and gross operating surplus as a residual item. The latter three components together constitute Census value added, which is also tabulated as a percentage of gross output. During 1977, 65% of the total value of manufacturing output, was spent on material consumption, 20% as labour cost, and 7% as miscellaneous operating expenses, leaving 8% as the gross operating surplus. Census value added represented 35% of the gross output total.

3.23 Concerning the proportion of material consumption in manufacturing output, industry groups producing professional and optical equipment, basic metals, textiles, non-metallic mineral products and food products had the highest figures, ranging from 71 to 76%. The highest labour cost contents were shown in the manufacture of transport equipment (47%), furniture and fixtures (36%), and footwear (32%). On miscellaneous operating expenses, the percentages relative to gross output were highest in the manufacture of beverages (25%), and transport equipment (13%). With regard to gross operating surplus, the highest ratios occurred in the manufacture of tobacco (51%), beverages (26%), chemical products (14%), non-metallic mineral products (14%), and in printing and publishing (14%). It should be noted that while the gross operating surpluses of individual manufacturing industries contained elements of depreciation and profit, those of the beverages and tobacco industries were inclusive of allowances for payment of duties in respect of alcoholic liquors and tobacco. Industries having the highest Census value added content in gross output were transport equipment (67%), beverages (66%), and tobacco (65%).

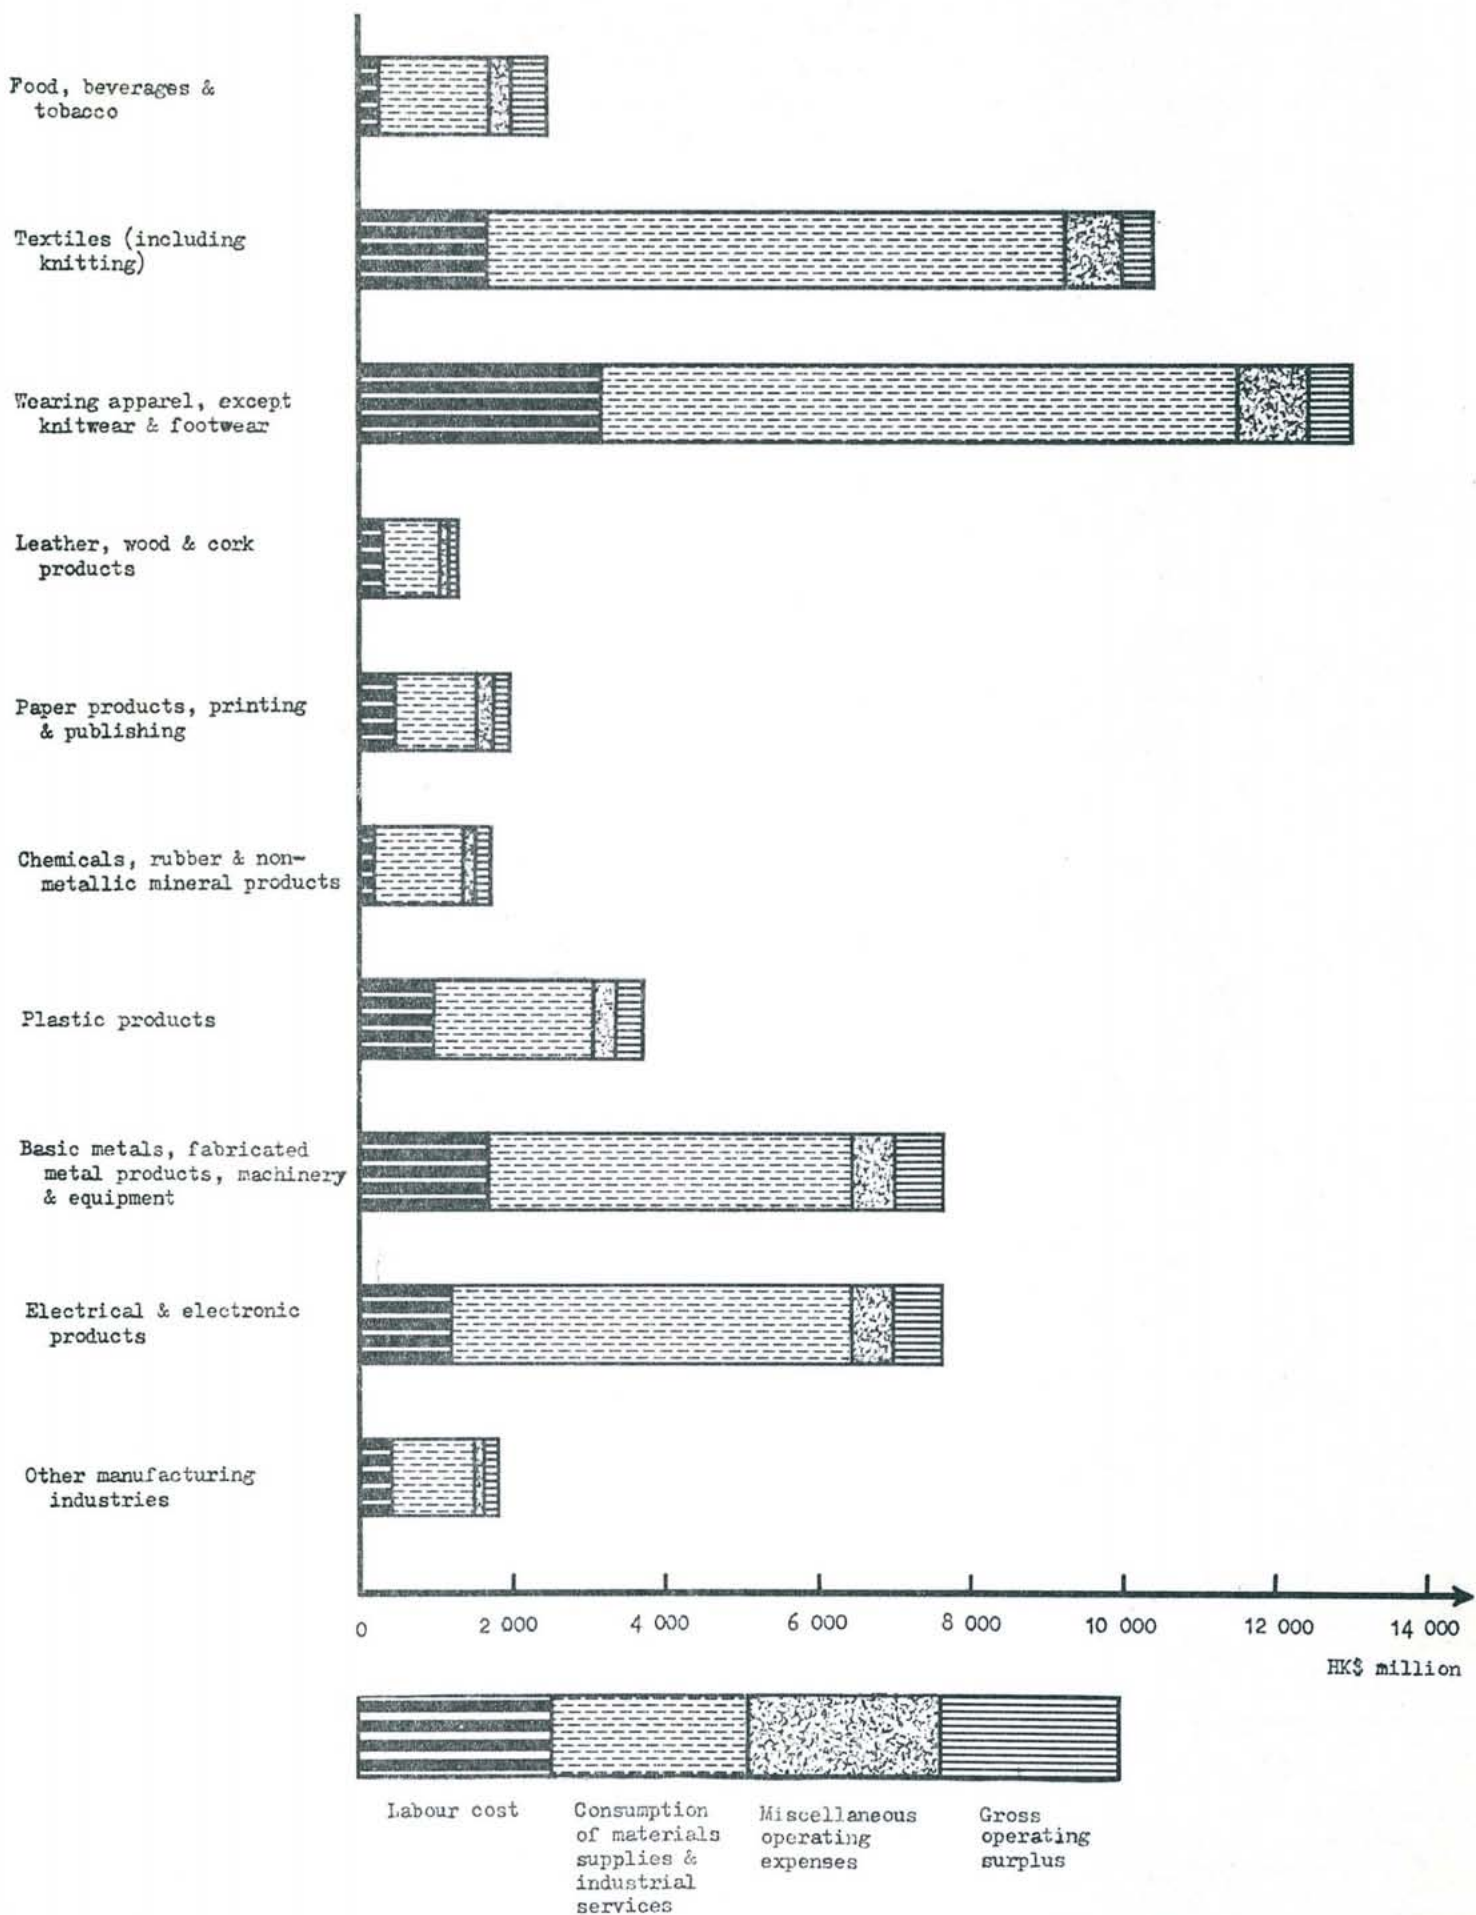

Table 15 Input contents of manufacturing output, analysed by industry group for the years 1976 and 1977

Industry group	Components of gross output (%)								Census value added as a percentage of gross output	
	Consumption of materials, supplies & industrial services		Labour cost		Miscellaneous operating expenses		Gross operating surplus

Footnote to Table 15

Figures on material consumption, gross operating surplus and Census value added for the tobacco industry in 1976 have been adjusted retrospectively upon further correspondence with a tobacco firm.

Chart 5 Gross output and its components for various manufacturing industries as in 1977

Summation of 4 blocks : Gross output

Commodity sales

3.24 Commodity sales statistics obtained from the 1977 Census were classified by industrial origin according to the United Nations International Standard Industrial Classification of All Economic Activities (ISIC). They may not be directly comparable, item by item, with domestic exports figures published in the Hong Kong Trade Statistics, which were classified according to the United Nations Standard International Trade Classification (SITC Rev. 2). For example, knitwear in the trade statistics include clothing items knitted directly from yarn, as well as those cut and sewn from knitted fabrics. However, in the 1977 Census, only those clothing items knitted directly from yarn are classified as knitwear. Clothing items manufactured by the process of cutting and sewing are classified as garments, irrespective of whether the constituent material is knitted or woven fabrics. Differences may also occur in those commodities produced from mixed materials, such as leather/rubber footwear, plastic/metal toys, and fabrics of blended textile materials. The existence of these discrepancies probably renders strict comparisons less meaningful, although they can be reduced by suitable aggregation of related commodities. This procedure is advisable whenever statistics of industrial production are compared with those of external trade.

3.25 Table 16 presents the sales statistics of major commodities produced by reporting establishments. They were chosen largely on the basis of their significance in terms of sales value. Altogether, they accounted for 61% of the overall sales of manufactured products.

3.26 Commodity groups with the largest sales in 1977 were trousers and shorts; woven cotton fabrics (including towelling, and pile and chenille fabrics); yarn of cotton and man-made fibres; blouses, dresses and skirts for women; plastic toys and accessories for toys; shirts for men; transistorized radios (including clock radios); watches (both mechanical and electronic); and knitted sweaters and cardigans. Compared with 1976, commodity groups having significant increases in the value of sales were watches (96%); portable cassette recorders (43%); books, magazines and other printed matters (18%); and blouses, dresses and skirts for women (17%). Commodity groups having significant decreases in the value of sales were woven cotton fabrics (-29%); gloves of leather and leather substitutes (-18%); electronic calculators (-16%); and trousers and shorts (-11%).

Table 16 Sales statistics of major commodities produced by reporting manufacturing establishments

Commodity	Unit	Quantity	Value (HK\$'000)
Jackets, overcoats and suits for men	'000	30 288	920 296

Product specialization and coverage

3.27 Table 17 contains a set of product specialization and coverage ratios arranged by industry group. The product specialization ratio indicates the degree to which establishments classified to a particular industry are specialized in making products which are characteristic of that industry. In connection with this, the coverage ratio denotes the degree to which primary products of a particular industry are manufactured by establishments classified to that industry, as opposed to secondary producers elsewhere in other industries.

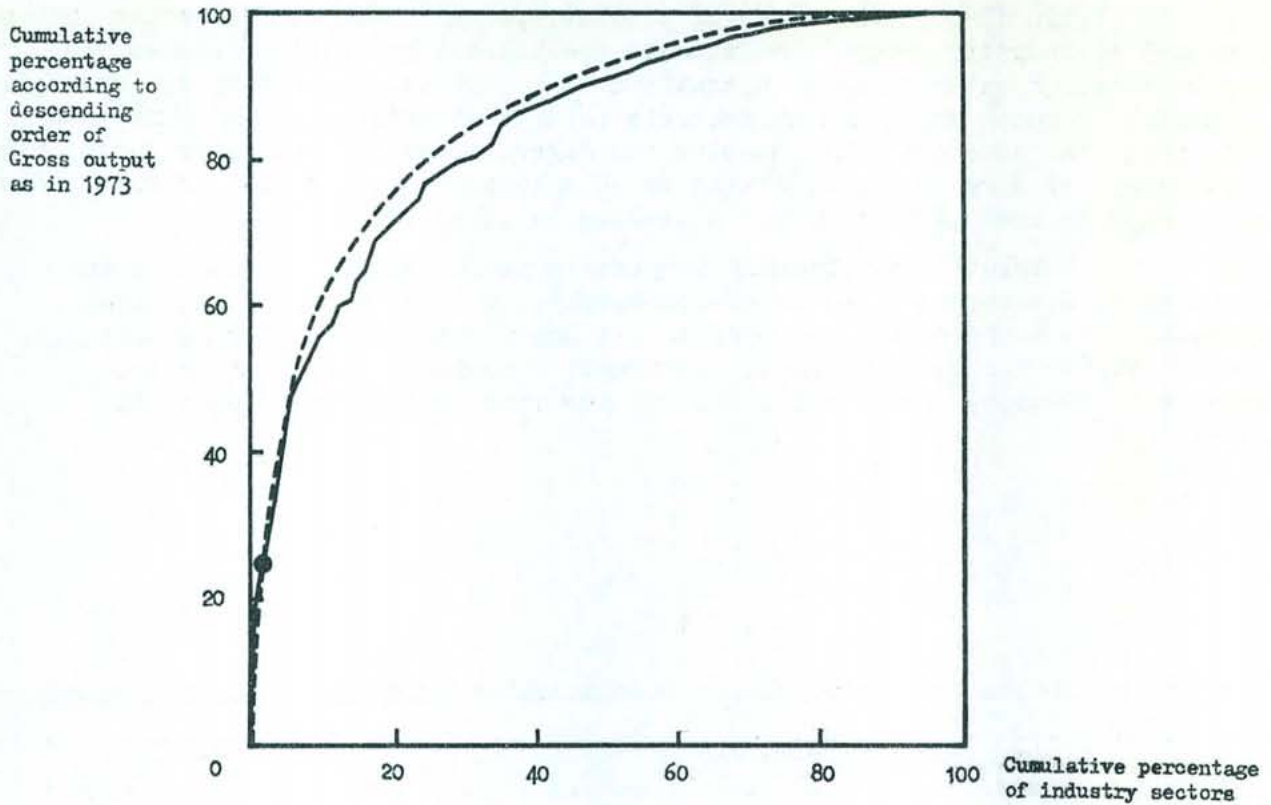

3.28 A complete (or virtually complete) specialization of products was observed in the tobacco, footwear, non-metallic mineral products, chemical products, and professional and optical equipment industries. Correspondingly, a complete (or virtually complete) coverage of products was found in the beverages, tobacco, non-metallic mineral products, and chemical products industries.

Table 17 Specialization and coverage ratios for reporting manufacturing establishments, analysed by industry group

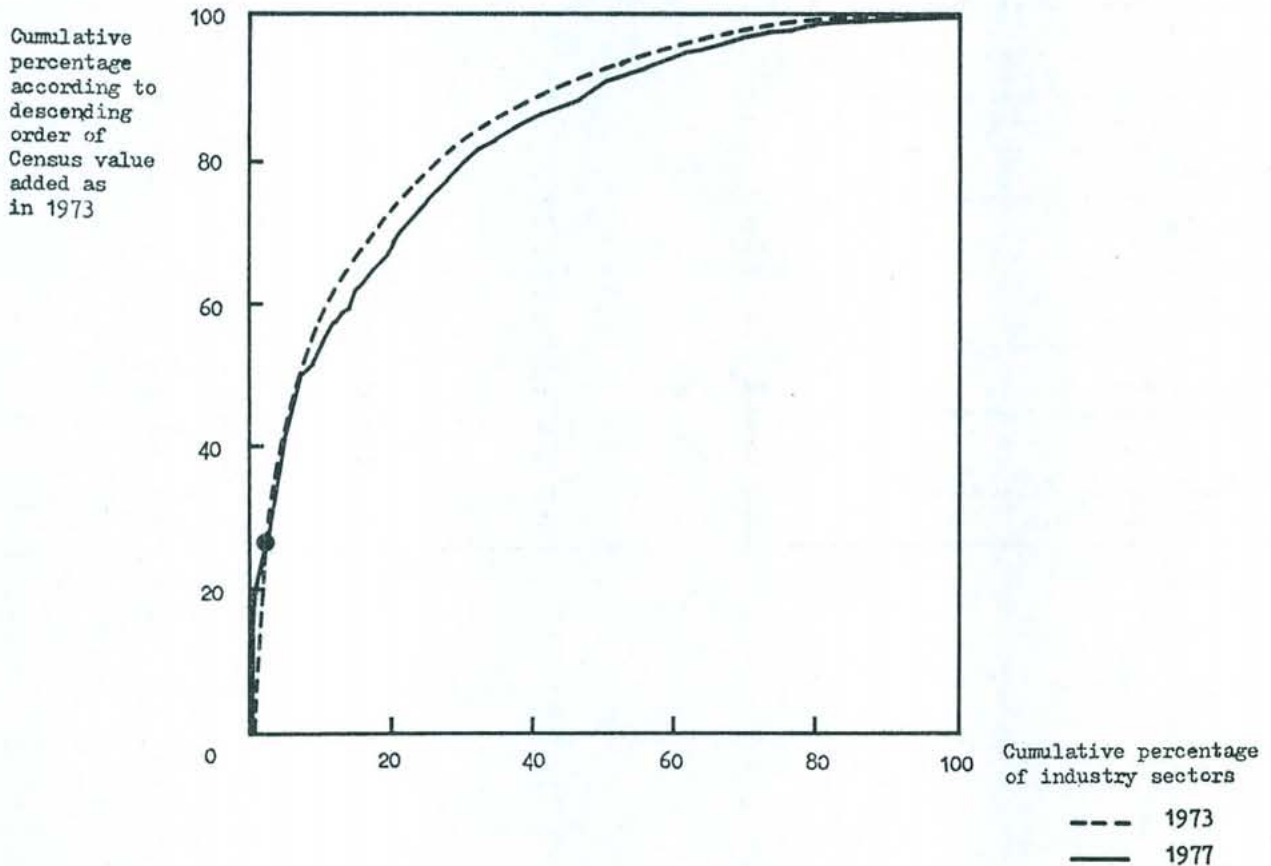

Industry group	Sales of primary products by industry group specified	Total sales of all goods produced in industry group specified.	Specialization ratio	Total sales of corresponding products by all industry groups	Coverage ratio
	I (HK\$ million)	II (HK\$ million)	I/II (%)	III (HK\$ million)	I/III (%)
Food	1 326	1 395	95	1 408	94
Beverages	443	460	96	443	100
Tobacco	191	191	100	191	100
Wearing apparel, except knitwear & footwear	10 819	11 440	95	11 383	95
Textiles (including knitting)	8 110	8 726	93	8 777	92
Leather & leather products, except footwear & wearing apparel	242	257	94	263	92
Footwear, except rubber, plastic & wooden footwear	183	183	100	188	97
Wood & cork products, except furniture	379	398	95	401	95
Furniture & fixtures, except primarily of metal	278	295	94	300	93
Paper & paper products	519	561	93	566	92
Printing, publishing & allied industries	985	1 028	96	1 029	96

Electrical machinery, apparatus, appliances & supplies	6 195	6 550	89	6 722	92
Transport equipment	124	131	95	130	95
Professional & scientific equipment not elsewhere classified, & photographic & optical goods	2 336	2 383	98	2 615	89
Other manufacturing industries	1 536	1 581	97	1 595	96

Chart 6 Concentration of manufacturing industries

(A) According to gross output

(B) According to Census value added

Note: The black dot on each graph signifies a point of transition separating those leading industries which have apparently become even more dominant in terms of economic contribution over the period 1973 to 1977, from the remaining industries which have become less so over the corresponding period. For Graph A, industries in the former category are the manufacture of outer garments and cotton weaving. For Graph B, they are the manufacture of outer garments, knit outerwear mills and cotton spinning.

TABLE A1 - PRINCIPAL STATISTICS FOR REPORTING MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY GROUP AND ANALYSED BY NUMBER OF PERSONS ENGAGED

Definitions of Statistical Terms

1. Number of persons engaged	equals	Number of working proprietors and active business partners (male and female)
	plus	number of unpaid family workers (male and female)
	plus	number of operatives (male and female)
	plus	number of other employees (male and female)
2. Number of employees	equals	number of operatives (male and female)
	plus	number of other employees (male and female)
3. Wages and salaries	equals	wages and salaries to operatives
	plus	wages and salaries to other employees
4. Labour cost	equals	wages and salaries to operatives
	plus	wages and salaries to other employees
	plus	other labour costs
	plus	payments to outworkers
5. Purchases of materials, supplies and industrial services	equals	purchases of materials/supplies
	plus	cost of goods resold in same condition as purchased
	plus	work done by other establishments
6. Sales	equals	sales of goods produced
	plus	resales of goods in same condition as purchased
7. Sales and work done	equals	sales of goods produced
	plus	resales of goods in same condition as purchased
	plus	work performed or industrial services rendered to others
8. Consumption of materials, supplies and industrial services	equals	purchases of materials/supplies
	plus	cost of goods resold in same condition as purchased
	plus	work done by other establishments
	less	stocks of materials/supplies at end of year
	plus	stocks of materials/supplies at beginning of year
9. Gross output	equals	sales of goods produced
	plus	stocks of work in progress and goods on hand for sale at end of year
	less	stocks of work in progress and goods on hand for sale at beginning of year
	plus	resales of goods in same condition as purchased
	plus	work performed or industrial services rendered to others
10. Changes in the book value of stocks	equals	book value of stocks at end of year of
		(i) materials/supplies
		(ii) work in progress
		(iii) goods on hand for sale
	less	book value of stocks at beginning of year of
		(i) materials/supplies
		(ii) work in progress
		(iii) goods on hand for sale
11. Census value added	equals	gross output
	less	consumption of materials, supplies and industrial services

12. Other receipts	equals	rents received
	plus	quota transfer receipts
	plus	income from other sources
13. Miscellaneous operating expenses	equals	rents and rates
	plus	interest payments
	plus	quota transfer payments
	plus	other operating expenses
14. Gross operating surplus	equals	Census value added
	less	labour cost
	less	miscellaneous operating expenses
15. Acquisition of fixed assets	equals	acquisitions of
		(i) buildings
		(ii) plant and machinery
		(iii) other fixed assets
16. Disposal of fixed assets	equals	proceeds from sales of
		(i) buildings
		(ii) plant and machinery
		(iii) other fixed assets
17. Gross additions to fixed assets	equals	acquisition of fixed assets
	less	disposal of fixed assets
18. Specialization ratio	equals	sales of primary products by <u>industry group specified</u>
		total sales of all goods produced in same industry group
19. Coverage ratio	equals	sales of primary products by <u>industry group specified</u>
		total sales of corresponding products by all industry groups

Notes to Statistical Tables

1. Reporting manufacturing establishments are those establishments selected for the Census who managed to provide completed returns during the Census enumeration, which generally took place some time after the prescribed Census reference period. Other establishments may fail to provide completed returns due to closure, suspension of business, non-contact despite repeated visits, etc. They are categorized as non-reporting establishments. Their economic contributions have been imputed and are presented in an aggregate form in Table 1 of the text.
2. Figures on the number of persons engaged are reckoned as at the end of the accounting period for each reporting establishment.
3. The 3-digit codes in the supporting tables represent industry groups and the 4-digit codes represent industry sectors. There are 139 industry sectors which are in turn classified into 22 industry groups. They together constitute the entire manufacturing industry.
4. An asterisk denotes statistics being suppressed for confidentiality reasons. The statistics are, however, taken into account in higher level totals.
5. N.E.C. means not elsewhere classified.
6. Individual entries of a column may not add up exactly to the respective totals due to rounding.
