香港人口在過去 60 年間增加超過一倍 Hong Kong population more than doubled over past 60 years

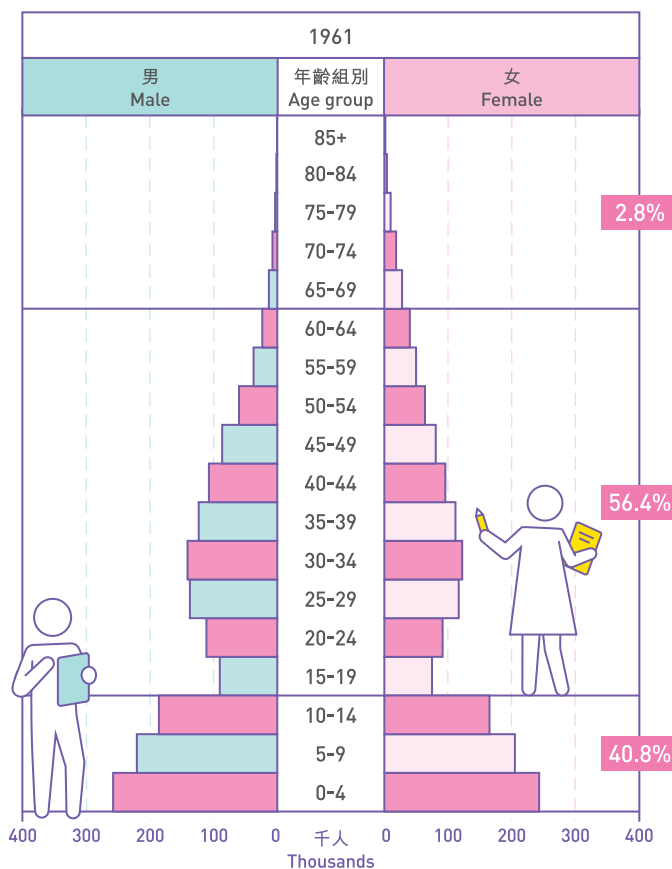

1.1 2021 年人口普查結果顯示，2021 年年中的居港人口數目為 741 萬人，較 1961 年增加超過一倍。

The result of the 2021 Population Census shows that the Hong Kong Resident Population in mid-2021 was 7.41 million, more than doubled that in 1961.

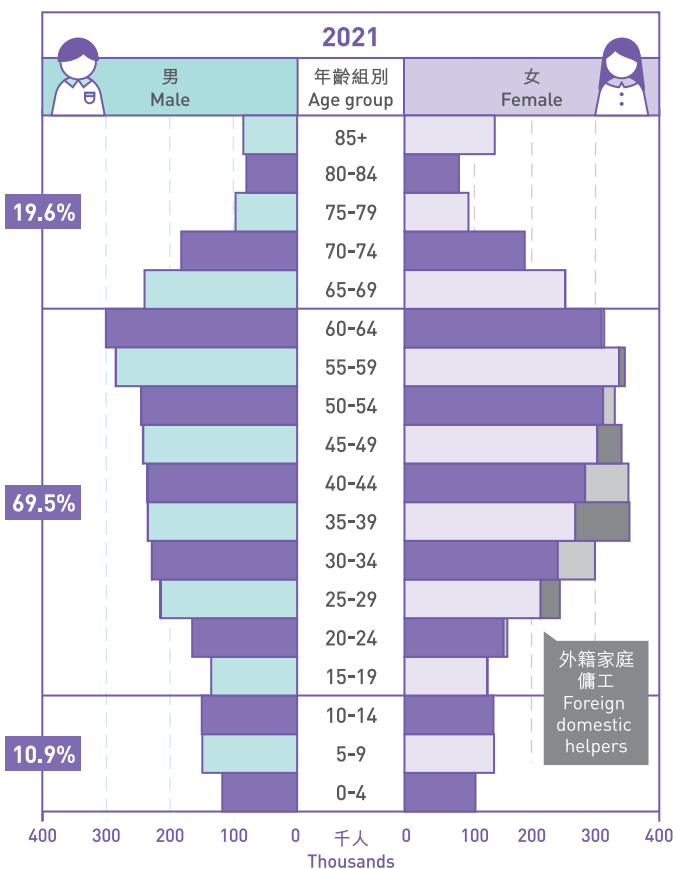

1.2 在 60 年代及 70 年代人口的增長較快，其後增長速度放緩，人口平均每年增長率從 1971 年至 1981 年的 2.6% 跌至 2011 年至 2021 年的 0.5%。

The growth of the population was faster in the 1960s and 1970s. Population growth slowed down afterwards, with the average annual population growth rate dropping from 2.6% for 1971-1981 to 0.5% for 2011-2021.

香港人口急速高齡化 Hong Kong population was ageing rapidly

- 2.1 本港人口持續高齡化，步伐近年開始加快，主要原因是戰後嬰兒潮出生的人陸續踏入老年。65 歲及以上的人口佔整體人口的比例，由 2011 年的 13.3% 上升至 2021 年的 19.6%。這 10 年間的升幅與之前 30 年的升幅相近（由 1981 年的 6.6% 上升至 2011 年的 13.3%）。
- 2.2 另一方面，隨着生育率下降，15 歲以下兒童數目由 1961 年的 128 萬人降至 2021 年的 81 萬人，佔總人口的比例亦由 40.8% 大幅下降至 10.9%。
- 2.3 綜合年輕人口減少而老年人口增加的兩個效應，年齡中位數由 1961 年的 23.2 歲上升至 2021 年的 46.3 歲。人口老化的現象可以從 1961 年及 2021 年的人口金字塔清楚顯示出來。

The ageing trend in the population continued and the pace of ageing became faster in the recent years, mainly attributable to the post-war baby boomers entering old age. The proportion of elderly persons aged 65 and above in the total population rose from 13.3% in 2011 to 19.6% in 2021. The increase in this 10-year period was similar in magnitude to that in the preceding 30-year period (the proportion increased from 6.6% in 1981 to 13.3% in 2011).

On the other hand, as a result of fertility decline, the number of children aged under 15 decreased from 1.28 million in 1961 to 0.81 million in 2021. Their proportion in the total population dropped significantly from 40.8% to 10.9%.

The combined effects of the decreased number of young persons and the increased number of elderly persons resulted in the increase of the median age of the population. The median age of the population increased from 23.2 in 1961 to reach 46.3 in 2021. The population ageing phenomenon is clearly seen in the 1961 and 2021 population pyramids.

03 2011 年及 2021 年按出生地點及年齡組別劃分的人口比例 Proportion of population by place of birth and age group, 2011 and 2021

逾 6 成人口在香港出生 Over 60% of the population was born in Hong Kong

3.1 人口遷移雖然是香港人口轉變的一個重要部分，但在香港出生的人口比例仍十分高，在過去 10 年維持逾 6 成。在中國內地／澳門／台灣出生的人口比例由 2011 年的 32.1% 下降至 2021 年的 29.9%。另一方面，在其他地方出生的人口比例在同期間由 7.4% 增至 8.4%。

Although migration is an important element of population change in Hong Kong, the proportion of population born in Hong Kong is still high. It maintained at over 60% throughout the past 10 years. The proportion of persons born in the mainland of China / Macao / Taiwan dropped from 32.1% in 2011 to 29.9% in 2021. On the other hand, the proportion of persons born elsewhere increased from 7.4% to 8.4% over the same period.

3.2 在 2021 年，65 歲及以上的人口中，43.0% 是在香港出生的。在香港出生的人口比例大致上隨年齡組別愈年輕而愈高，唯獨 25 至 44 歲在香港出生的人口比例較 45 至 64 歲的相應比例低。這是由於 25 至 44 歲的人口包括了大量外籍家庭傭工。

In 2021, among the population aged 65 and over, 43.0% were born in Hong Kong. Among successively younger age groups, the proportions of the population born in Hong Kong increased in general. However, the proportion of the population born in Hong Kong for those aged 25-44 was lower than that for those aged 45-64, as the population aged 25-44 included a large number of foreign domestic helpers.

Notes: (1) The number of males per 1 000 females in the respective age groups.

性別比率自 80 年代開始持續下降 Sex ratio continued to decline since 1980s

4.1 香港人口的整體性別比率（指男性人口數目相對每千名女性人口）由 1961 年的 1 056 增至 1981 年的 1 093，但這比率自 1981 年起開始下降，至 2021 年的 839。

The overall sex ratio (number of males per 1 000 females) for the Hong Kong population increased from 1 056 in 1961 to 1 093 in 1981. However, it started to decline since then, dropping to 839 in 2021.

4.2 在分析性別比率時，需要考慮幾個因素：（甲）出生時，男嬰比女嬰多；（乙）香港人口中有大量外籍家庭傭工（其中大部分是女性）；（丙）中國內地新來港人士中，不少是香港男士的妻子；及（丁）女性的壽命較男性長。

In analysing the sex ratio, it is relevant to consider several factors: (a) at birth there are more boys than girls; (b) there are a large number of foreign domestic helpers, who are mostly females; (c) for the new arrivals from the mainland of China, many are wives of Hong Kong men; and (d) females live longer than males.

4.3 15 歲以下兒童的性別比率由 1961 年的 1 083 下降至 1971 年的 1 047，然後回升至 1981 年的 1 079。自 1991 年起，這性別比率變化不大，徘徊於 1 062 至 1 084 之間。

For children aged under 15, the sex ratio declined from 1 083 in 1961 to 1 047 in 1971, and then rebounded to 1 079 in 1981. Since 1991, the sex ratio remained stable at 1 062-1 084.

4.4 較為顯著的改變出現在 25 至 44 歲及 45 至 64 歲這兩個年齡組別。在 25 至 44 歲人口中，性別比率由 1981 年的 1 223 下跌至 2021 年的 731。在 45 至 64 歲人口中，性別比率由 1991 年的 1 144 下跌至 2021 年的 806。性別比率下跌主要是大量的女性外籍家庭傭工及中國內地新來港人士所致。撇除外籍家庭傭工後，2021 年 25 至 44 歲人口的性別比率是 905，而 45 至 64 歲的則是 849。

Relatively more significant changes occurred in the age groups of 25-44 and 45-64. Among persons aged 25-44, the sex ratio dropped from 1 223 in 1981 to 731 in 2021. For persons aged 45-64, the sex ratio dropped from 1 144 in 1991 to 806 in 2021. The influx of female foreign domestic helpers and new arrivals from the mainland of China contributed mainly to the fall in the sex ratios. After excluding foreign domestic helpers, the sex ratio in 2021 became 905 for those aged 25-44 and 849 for those aged 45-64.

4.5 由於女性傾向較男性長壽，65 歲及以上的年齡組別的性別比率持續低於 1 000。

As females tend to live longer than males, the sex ratio of those aged 65 and over remained at below 1 000.

05

2011 年及 2021 年按性別及年齡組別劃分的 20 至 49 歲從未結婚的人口比例（不包括外籍家庭傭工）
Proportion of never-married population aged 20 - 49 (excluding foreign domestic helpers) by sex and age group, 2011 and 2021

男女均趨向遲婚

Both women and men were postponing their marriage

5.1 男女均趨向遲婚，20 至 49 歲人口中從未結婚的比例在過去 10 年間有所上升。有關升幅（撇除外籍家庭傭工）在 30 至 34 歲的男性及 25 至 29 歲的女性中尤其顯著。30 至 34 歲男性從未結婚的比例由 50.0% 上升至 57.8%，升幅達 7.8 個百分點；而 25 至 29 歲女性相應的比例則由 71.4% 上升至 79.6%，升幅達 8.1 個百分點。

Both women and men were postponing their marriage. There had been an increase in the proportion of never-married population in the ages of 20-49 over the past 10 years. The increase in proportion (excluding foreign domestic helpers) was particularly remarkable among males aged 30-34 and females aged 25-29. The proportion of never-married males aged 30-34 increased by 7.8 percentage points, from 50.0% to 57.8%; and the corresponding proportion for females aged 25-29 increased by 8.1 percentage points, from 71.4% to 79.6%.

(2) 有關教育特徵的數據是根據當年上半年的情況作訪問。故此，剛滿 3 歲的兒童可能因學期初（通常是早一年的 9 月份）還未達入學年齡的最低要求而在當年上半年仍未入讀學前教育。

(3) 括號內數字是把有關年齡及性別組別人口中的外籍家庭傭工扣除後編製的就學比率。

Notes: (1) The percentage of population attending full-time educational institutions in the respective age groups.

(2) Data related to educational characteristics were enquired with reference to the first half of the year. Hence, children just reaching age 3 might not be attending pre-primary education in the first half of the year as they had not yet reached the minimum age for entrance at the beginning of the school term (usually in September of the previous year).

(3) Figures in brackets are school attendance rates compiled with foreign domestic helpers excluded from the population in the respective age-sex groups.

年青人的就學比率增加

School attendance rate of youths increased

2.1 在 2021 年，3 至 5 歲兒童的就學比率為 88.4%，而 6 至 17 歲的兒童幾乎全部就學。另一方面，在過去 10 年，18 至 24 歲的年青人的就學比率，由 49.1% 增加至 55.0%。這顯示專上學院提供更多教育機會，讓年青人可繼續留校進修。

The school attendance rate of children aged 3-5 was 88.4% in 2021, and school attendance for children aged 6-17 was almost universal. On the other hand, over the past 10 years, the school attendance rate of youths aged 18-24 increased from 49.1% to 55.0%. This suggests that more young people continued their higher education as a result of the greater educational opportunities available in post-secondary institutions.

03 2021 年按性別、年齡組別及教育程度（最高就讀程度）劃分的 15 歲及以上的人口比例 Proportion of population aged 15 and over by sex, age group and educational attainment (highest level attended), 2021

2021 年年輕女性就讀專上教育人口較男性多

More young females than males were attending post-secondary education in 2021

3.1 整體而言，香港女性的教育程度較男性為低。這是由於年長女性在她們年輕時受教育的機會較低。在 2021 年，15 歲及以上人口中，84.6% 的男性曾就讀中學及以上程度的課程，女性則有 79.2%。

For Hong Kong as a whole, females appeared to have lower level of educational attainment than males. This was because the figures included older generation females who generally had a smaller chance of receiving education when they were young. The proportion of males having attended secondary and higher education in 2021 was 84.6% for the population aged 15 and over, as against 79.2% for females.

3.2 儘管整體上兩性的教育程度有所不同，但在 2021 年，年輕女性與男性同樣擁有良好的教育程度。在 15 至 24 歲及 25 至 34 歲的女性中，分別有 99.5% 及 98.3% 曾就讀中學及以上程度的課程，而男性的相應比例則分別為 99.6% 及 99.2%。如只看就讀專上教育的比例，15 至 24 歲的女性的數字（55.0%）事實上已較同一年齡組別的男性（50.7%）為高。

Notwithstanding the overall sex differential in educational attainment, younger females were as well-educated as their male counterparts in 2021. Of females aged 15-24 and 25-34, 99.5% and 98.3% respectively had attended secondary and higher education; the corresponding proportions for males were 99.6% and 99.2% respectively. When looking at the proportion of having attended post-secondary education, the figure for females aged 15-24 (55.0%) was indeed higher than that for males in the same age group (50.7%).

「商科課程」繼續成為最多曾接受專上教育人士修讀的科目
“Business and commercial studies” remained as the most popular field among the population having attended post-secondary education

4.1 在 2021 年，曾接受專上教育的人士中，修讀「商科課程」的比例為 32.0%。「文學及社會科學」和「機械、電機、電子及輪機工程」為其次兩個最普遍的修讀科目。

In 2021, the proportion of the population having attended post-secondary education in the field of “Business and commercial studies” was 32.0%. “Arts and social science” and “Mechanical, electrical, electronic and marine engineering” were the next two most popular fields of education.

5.1 不同教育程度的學生採用不同的交通方式上學。在 2021 年，有 38.5% 學前教育學生及小學生主要是步行上學的，這可能是由於居所與學校十分接近。在中學生方面，主要乘搭香港鐵路（本地線）和巴士上學的比例分別為 28.3% 及 24.8%。

The mode of transport used by students varied among students with different levels of education. In 2021, 38.5% of the pre-primary and primary students mainly walked to school probably because of the close proximity of the schools to their homes. For secondary students, the proportions of them mainly travelling to school by Mass Transit Railway (Local line) and bus were 28.3% and 24.8% respectively.

高收入住戶有較大的機會作內部遷移

Higher income households were more likely to migrate internally

5.1 就住戶月入中位數而言，曾作內部遷移的住戶較未曾者為高。這現象與高收入住戶有較高的負擔能力作內部遷移有關。

Households which had internally migrated had a higher median monthly household income than those not. This phenomenon was likely related to the greater affordability of higher income households to migrate internally.

5.2 遷往香港島的住戶的每月收入中位數為 55,980 元，比遷往其他區域的住戶的月入中位數為高。然而須注意的是，就那些沒有曾作內部遷移的住戶而言，香港島住戶的每月收入中位數也較其他區域的住戶為高。

The median monthly household income for households that had internally migrated to Hong Kong Island was \$55,980, higher than those which had internally migrated to other areas. It has nevertheless to be noted that for those households which had not internally migrated, the median monthly household income for those on Hong Kong Island was also higher than households elsewhere.

Statistics covering persons of any marital status (including never married, married, widowed, divorced and separated) living with child(ren) aged under 18 in the same household (termed as "persons living with child(ren) aged under 18" hereafter) are also presented in this article to facilitate analysis.

2.2 住戶收入包括職業收入、恆常現金社會福利，以及其他收入（例如股息及利息、租金收入、非住戶成員定期給予的款項等）。在 2016 年至 2021 年間，政府在衛生及社會福利等重要政策範疇的開支持續顯著增加，再加上 2021 年為紓解民困推出大規模的一次性措施，一定程度抵銷了人口結構轉變對住戶收入差距的影響。

Household income includes employment income, recurrent cash social benefits and other income (e.g. dividends and interest, rental income, regular contributions from non-household members, etc.). Between 2016 and 2021, Government expenditure on major policy areas such as health and social welfare continued to rise visibly. On top of that, the one-off measures at a massive scale rolled out in 2021, which aimed to relieve people's financial burden, did offset the effects of demographic structural changes on household income disparity to a certain extent.
