Foreword

This report presents the final results of the Census conducted in March 1981 by districts. It contains sets of tables summarising the social, economic and demographic characteristics of the population.

The figures refer to the population of Hong Kong on 9th March 1981. An adjustment has been made to the total headcount to allow for persons in non-contact households and omitted quarters. On the other hand, the figures exclude transients, Vietnamese refugees (which together amount to 34 506 persons) and 123 252 residents who were away from Hong Kong on the reference date.

For the purpose of this report, the boundaries of districts closely follow those adopted for the District Administration Scheme except in some cases where minor adjustments have been made to the electoral boundaries to bring them in line with the boundaries of tertiary planning units and street blocks/village clusters, which are the basic geographical units for tabulating the Census data. Maps showing the district boundaries are included at the appendix.

Further results from the 1981 Census on the age and sex characteristics of the population by District Board constituency areas are contained in the "District Board Constituency Area Population by Age" to be issued concurrently with this report.

The 1981 Census was a two-phase operation consisting of a 100% headcount by age and sex and a 20% sample enumeration of detailed social, demographic and economic characteristics of the population. Figures on living quarters (by type), households (by household size) and persons (by age and sex) are obtained from the 100% complete count, whilst details regarding all other aspects of the population are provided by estimates derived from the 20% sample enumeration.

Owing to sampling errors, the total count of households and persons derived from the sample estimates may be different from the number actually enumerated in the complete census. Both figures are presented in this report. The estimated count is referred to as 'TOTAL (ESTIMATED)', and the actual count as 'TOTAL (ENUMERATED)'.

All tables showing the characteristics of households and persons include both land and marine population, classified by reference to their place of enumeration.
